

**METHOD FOR IMPROVING THE
PROCESSABILITY OF BUTYL POLYMERS**

ABSTRACT OF THE DISCLOSURE

The present invention relates to a method for improving the processability of butyl polymers by increasing the amount of repeating units derived from at least one multiolefin monomer in the polymer chain to more than 2.0 mol%. In particular, the present invention relates to a method of reducing the cold flow by increasing the amount of repeating units derived from at least one multiolefin monomer in the polymer chain to more than 2.0 mol%.
